

Preface

Abstract

Kurzfassung

Acknowledgements

1. Introduction 1

1.1 Statement of the problem 1

1.2 Location of the study area 3

1.3 Geologic setting 6

1.4 Previous work 10

2. Petrography 12

2.1 Ophiolites 13

2.2 Tectonic Melange 36

2.3 Granite Gneiss 37

2.4 Calcalkaline intermediate intrusive rocks 40

2.5 Calcalkaline acidic intrusive rocks 52

2.6 Red, young, alkaline, late orogenic granite 60

2.7 Dark coloured dike rocks 64

3. Geochemical investigations 72

3.1 Analytical methods 72

3.2 Geochemistry of calc alkaline and alkaline intermediate and acidic intrusive rocks 78

3.3 Geochemistry of dark coloured dikes 98

4. Structural elements and their interpretations 112

4.1 Linear analyses 112

4.2 Faults and shear zones in the study area 124

4.2.1 Proterozoic Pan-African shear zones and faults 125

4.2.2 Normal and local faults 133

4.2.3 Phanerozoic faults 138

4.3 Lineations in the study area 140

4.4 Interpretation of the dikes 147

4.5 Structural statistical analysis of the study area 155

5. Metamorphism 185

6. Age sequence of the rocks, deformation phases and metamorphism 191

6.1 .Description of critical outcrops in the study area 191

6.2. Deformational and folding phases 204

7. Summary and tectonic development in the Wadi Ghadir area 216

8. References 223

Appendix: geochemical analyses
